

User clicks #2 -calls
action creator

Action Creator
function(return {
 type: BOOK_SELECTED
 book: {title: 'Book 2'}
}

Action creator returns
an Action

```
{  
  type: BOOK_SELECTED  
  book: {title: 'Book 2'}  
}
```

Action automatically
sent to all reducers

ActiveBook Reducer

```
switch(action.type) {  
  case BOOK_SELECTED:  
    return action.book  
  default:  
    //I don't care about this action. do nothing  
    return currentState  
}
```

activeBook property on
state set to the value
returned from the active
book reducer

All reducers processed the actions and
returned the new state. New state has
been assembled. Notify containers of the
changes to the state. On notification,
containers will re-render with new props

```
{  
  activeBook: {title: 'JavaScript'}  
  books: [ {title: 'Dark Tower'}, {title: 'JavaScript'} ]  
}
```
